### Question: 1

The IEEE 802.11n standard provides 40-MHz channels, improved MAC efficiency, and MIMO. Which three elements define the 802.11n implementation of MIMO? (Choose three.)

- A. channel bonding
- A. dynamic frequency selection
- B. maximal ratio combining
- C. packet aggregation
- D. spatial multiplexing
- E. transmit beam forming

Answer: C, E, F

### Question: 2

Which two statements about WiMAX technology are true? (Choose two.)

- A. WiMAX is defined by 802.11i.
- B. Typically, fixed WiMAX networks have a higher-gain directional antenna installed near the client.
- C. WiMAX is capable of working as a long-range system over several miles.
- D. WiMAX works only for licensed frequencies.

Answer: B, C

### Question: 3

Which governing body analyzes the applications and environments in which wireless networks are used?

- A. EIRP
- B. ETSI
- C. FCC
- D. IEEE
- E. WiFi Alliance

Answer: D

#### Question: 4

Which description best describes upfade in a multipath environment?

- A. In this situation, multiple signal paths are not sent at exactly the same time. The receiver receives a positive crest on the primary signal and a negative crest on the secondary signal.
- B. In this situation, the multiple signal paths are distorted and difficult to understand.
- C. In this situation, the multiple signal paths are weaker than they should be because the signals are out of phase with each other.
- D. In this situation, the signal is stronger than it should be because multiple signal paths are received twice at exactly the same time, which results in the multiple signals being in-phase.

Answer: D

#### Question: 5

A controller is connected to a Cisco Catalyst switch. The switch port configuration looks like this:

```
interface GigabitEthernet 1/0/10
switchport
switchport trunk encapsulation dot1q
switchport trunk allowed vlan 1,20,30,50
switchport trunk native vlan 20
switchport mode trunk
```

Which controller CLI command assigns its management interface to the native VLAN interface of the Cisco Catalyst switch?

- A. config interface vlan management 0
- B. config interface vlan management 1
- C. config interface vlan management 20
- D. config interface vlan management 30
- E. config interface vlan management 50

Answer: C

### Question: 6

Which statement about an infrastructure basic service set is true according to IEEE 802.11 specifications?

- A. The set also is called an ad hoc network.
- B. The BSSID is generated from the first wireless client that starts up in the IBSS.
- C. The set enables the use of ESS.
- D. No signals are relayed from one client to another client.

Answer: C

### Question: 7

Which two factors must be considered when evaluating an RF interferer for severity? (Choose two.)

- A. distance from the AP
- B. dBm
- C. the type of security crack being used
- D. duty cycle
- E. number of interfering IP stations in the cell
- F. duplicate SSID

Answer: B, D

### Question: 8

Which two items are needed to discover the IP address of a new Cisco Aironet 1260 autonomous AP that just finished booting? (Choose two.)

- A. username = "cisco" and password = "cisco"
- B. username = "Admin" and password = "Cisco"
- C. username = none and password = "Cisco"
- D. show int vlan1
- E. show int bvi1
- F. show int gigabitethernet0
- G. show int radio0-802.11n
- H. show int radio1-802.11n

Answer: C, E

### Question: 9

Which statement correctly describes the procedure for a lightweight AP to successfully establish a connection to a controller?

- A. The AP authenticates the received Cisco WLC certificate as valid. The AP then sends its certificate to the controller.
- B. The AP sends its certificate to the controller. The AP then authenticates the received Cisco WLC certificate as valid.
- C. The AP sends its certificate to the RADIUS server. The AP then authenticates the controller certificate as valid.
- D. The AP sends its certificate to the RADIUS server. The AP then authenticates the RADIUS certificate as valid.
- E. The AP authenticates the received RADIUS server certificate as valid. The AP then sends its certificate to the RADIUS server.
- F. The AP authenticates the received RADIUS server certificate as valid. The AP then sends its certificate to the controller.

Answer: B

### Question: 10

Which two statements about the requirements to configure inter-controller roaming are true? (Choose two.)

- A. The same mobility domain names are configured across controllers.
- B. The same RF group names are configured across controllers.
- C. The same controller hardware version is configured across controllers.
- D. The same AP manager interface is configured across controllers.
- E. The same virtual interface is configured across controllers.
- F. The same controller software version is configured across controllers.

Answer: A, E
