

# Hippo CMS Announces Partnership with Dev9 for Web Content Management

Java-based, Open Source CMS Software Provider Partners with Software Development Firm to Create Perfect Customer Journeys

**Info** Boston, USA | Published on: April 27, 2016

**Summary** **Hippo, an open-source, Java-based web content management software provider, is pleased to announce a new partnership with Dev9, a Kirkland, Washington-based custom enterprise software development company with an extensive client roster of Fortune 100 companies.**

**Details** In their search for a CMS partner, Dev9 was looking for a solution that provided support for continuous delivery best practices, content-as-a-service model for development, an enjoyable development experience, agility and Java-based security and scalability – all of which Hippo CMS delivers.

“Content management is fundamental to the operation of almost every business,” said Will Iverson, Dev9 Co-founder and Chief Technology Officer, “In working with enterprise clients in recent years, we found that traditional, large, expensive CMS platforms just weren’t keeping up with modern content needs. We needed a go-to platform to recommend and deploy for our clients that would provide the flexibility and scalability necessary for modern content demands. Hippo CMS is that solution.”

Arjé Cahn, CTO and co-founder of Hippo says: “We love how Dev9 understands the challenges of the modern enterprise in their digital transformation. It closely matches our product vision, where we focus on flexibility and agility, combined with our well known best-of-breed architecture, seamlessly integrating in any enterprise digital customer experience model. Dev9’s focus on Continuous Delivery is a perfect fit with the Hippo product and it will greatly help their customers deliver on the digital transformation challenges they’re facing.”

## About Dev9

Dev9 is a custom software development firm focused on Java and JavaScript technologies. We build custom software solutions based on Continuous Delivery – a set of processes and tools that leverages a combination of Lean principles and the heavy use of automation. Typical projects are web services at scale (e.g. Spring Boot), including integration with SQL, NoSQL and other enterprise systems. We also build client-side applications, integrating platforms such as AngularJS, Android and iOS. Developer-to-Operations and DevOps implementations often feature container strategy development (e.g.
