

CHANGING THE RULES OF ENGAGEMENT

FFWD Wheels introduces a new high end hub set for all RYOT models!

Ever since the early days FFWD hubs have been part of the wheel specifications. Besides the Swiss options the FFWD hubs have been the starting point for most models. In all these years the knowledge of hubs and its internals has grown into a great reference for the quality that is needed to create the center of each wheel.

The result is a completely new designed FFWD hub set.

THE FFWD TWO/ONE HUBS with ratchet system!

Different from the current FFWD hubs in TYRO wheels is the 2:1 spoke ratio. The new hubs do share the same 36T ratchet system as well as sizing for end caps so all spare parts are interchangeable.

The TWO/ONE hubs get their name from the 2:1 spoke ratio. Wheels are built with double the amount of spokes on the critical side of the wheel. This ensures more stability and stiffness at the right place!

In reference to the DT Swiss 350 hubs the FFWD hubs perform better at:
Bearing sealing - improved closing system ensures less maintenance
Bearing performance - bigger sized bearings in rear hub for higher longevity
Ratchet system - 36 teeth ratchets with 10 degree engagement angle

The new FFWD hubs will be available for Shimano, SRAM and Campagnolo (including N3W) and can be converted to quick release and 15mm thru axle with separate kits.

From middle of June the RYOT family will be available with the new hubs!

Set prices:

RYOT33 - 1299 Euro

RYOT44 - 1399 Euro

RYOT55 - 1499 Euro
