About Keezel Company

Keezel Company developed the Keezel, the first device and service to bring top-notch online security and privacy to consumers on the go, across all devices. Keezel is an easy-to-use device that unlocks secure, fast and reliable browsing for all, no matter where someone may be.

Keezel is democratizing privacy and security by offering non-technical users the highest level of protection. The device is designed for everyday users anywhere in the world, packing top-notch security and flexibility in a user-friendly, one-button-only device. The Keezel can protect up to 5 or 6 devices at the same time, connecting through WiFi and enabling the Keezel to operate completely wireless.

Through its partnerships with multiple VPN providers, Keezel Company offers users the largest and most reliable VPN networks in the world. After launching at CES 2016, the devices will begin shipping to more than 70 countries and will be available in retail stores starting spring 2016. Keezel Company is based in Amsterdam and was established in February 2015.

The Keezel device

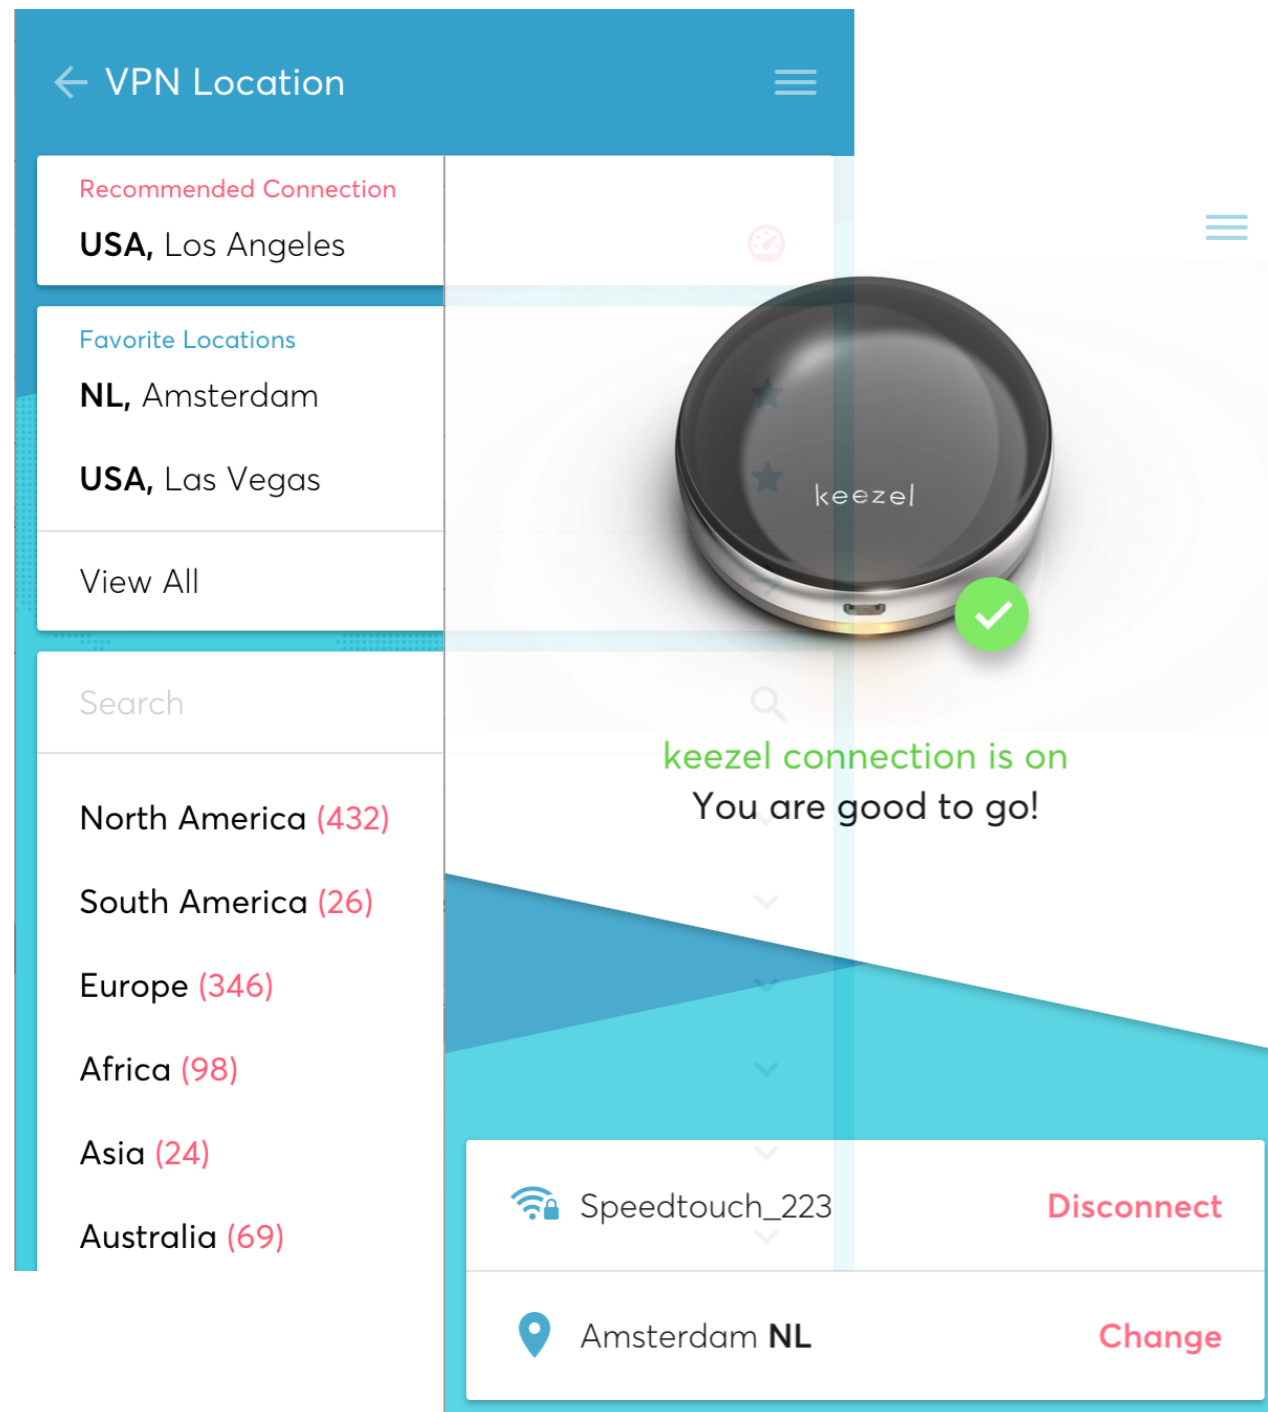

Keezel is a portable personal device that enables users to connect to any Wi-Fi internet connection with the protection of a VPN.

The device is a user-friendly hotspot that, as hardware, offers more security and flexibility than traditional VPN software. Keezel Company's open source technology is powered by a dual-core ARM processor.

It has two physical wireless modules, a 7000mah battery, a USB host port and a Micro USB charging port.

Keezel network

Keezel Company partners with the best VPN providers on the market, including PureVPN, Le VPN and ProVPN, to bring users better connections with speed, geographic reach and reliability.

For the first time users can connect to a combined network of over 1250 servers in 160+ countries for an unprecedented VPN experience.

Users may also connect two Keezel devices to create a VPN connection to their home network while traveling.

Key features

Security

Use Keezel to ensure a secure connection on any device while traveling. Keezel blocks third parties to keep your device safe from malicious hackers, protecting against credit card fraud, identity theft and theft of client data.

Privacy

Keezel's VPN setup stops your provider and wireless network providers, like coffee shops, hotels and airports, from monitoring your activity.

Circumvent censorship

Check your social media and watch your favorite TV shows and sports teams no matter where travels take you. Say goodbye to blocked sites, with access to every site wherever you may be in the world.

Key features

Enhance Wi-Fi

Whether you are working in a coffee shop, on the train or in the comfort of your own home, Keezel is the solution. Create a Wi-Fi network or enhance your current one with Keezel for the best experience.

Protect all your devices at the same time

Keezel protects all your devices at the same time, with no additional setup, so your Android or iOS cell phone, laptop, and tablet are all protected wherever you go and work.

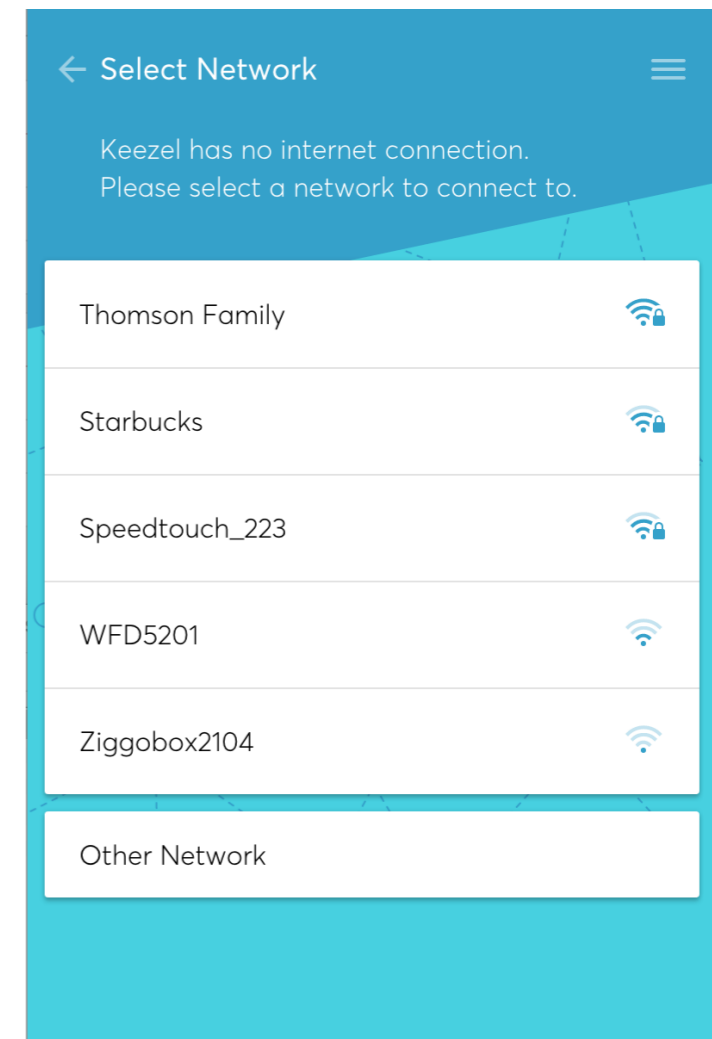

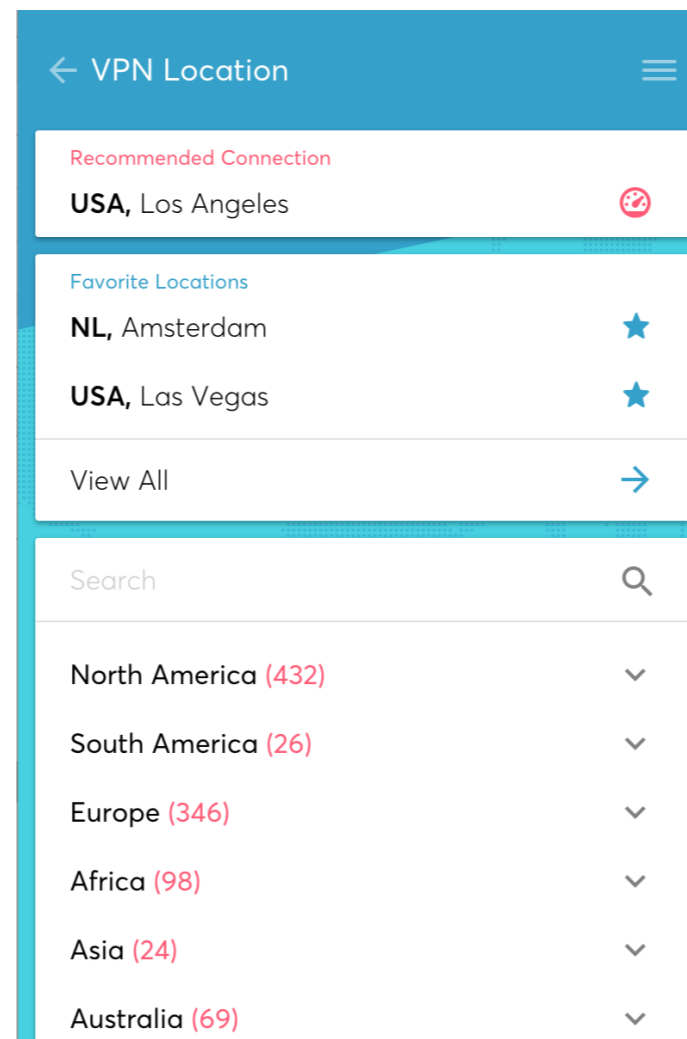

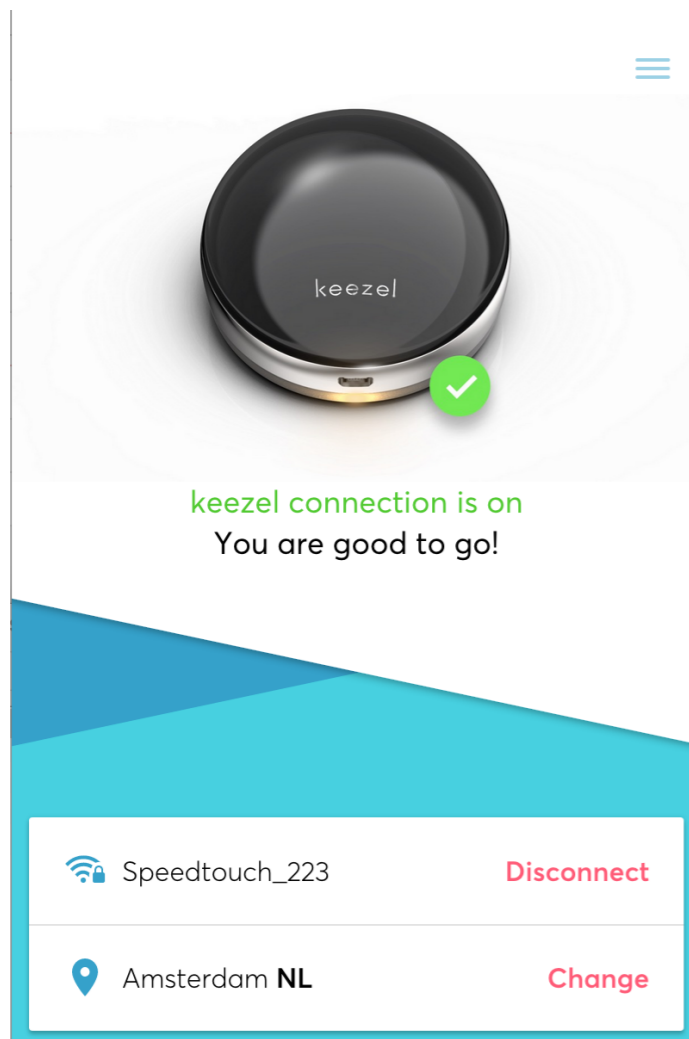

Charge your devices

Charge your mobile devices while commuting with Keezel.

Executive bios

Aike Müller

Aike Müller is co-founder of Keezel and a skilled inventor with several companies under his belt. Aike's career in information management and IT security began as an M&A IT expert at PwC. He went on to co-found a government-contract consulting firm specializing in automated assurance. As a freelance consultant Aike worked on process and supply chain assurance for national and international clients in logistics, retail and sustainable agriculture. He developed Keezel as a solution to security issues he encountered while working at client locations. Aike's previous ventures include starting a craft beer brewery.

Friso Schmid

Friso Schmid is co-founder and the business strategist of Keezel. He started his career as an IT consultant at Capgemini, where he worked with national and international clients. Friso left Capgemini to join the government-contract consulting firm with Aike. When it was time to move on to his next project, Friso founded a company that developed a Big Data recommendation engine matching candidates with companies. Friso and Aike rejoined in 2013 to work on the early version of Keezel and prepare for the crowdfunding campaign. Outside of Keezel, Friso plays keys in the Dutch indie band Maggie Brown. On a given night you can catch him performing in Amsterdam.
