

Fastned starts limited issue of certificates of shares

And gets a listing at the new European stock exchange Nxchange

Amsterdam, April 14th, 2016. **Fastned, that is building a European network of fast charging stations for electric cars, has started a limited issue of certificates of shares to finance new stations in The Netherlands and abroad. The issue will take place at the new pan-European stock exchange Nxchange that is launched today. The listing of Fastned at NPEX is suspended immediately. From today onwards all certificates of shares of Fastned will be listed at the Nxchange stock exchange. The issue consists of 650.000 new certificates of shares. The price range for issue is between 10 and 15 euro per certificate. Subscribing to the offer is possible from April 14th to May 19th via the websites of Fastned and Nxchange.**

Fastned is currently funded with 5.5 million euro in capital and 12.5 million euro in convertible loans. In addition, co-founder Bart Lubbers has guaranteed to cover operational costs until the end of 2018 with a 5 million loan facility via his holding company.

With this issue Fastned wants to raise new capital to finance the construction of new stations in the Netherlands and further expansion into Europe. Fastned has the ambition to operate a pan-European network of fast-charging stations by 2020 where cars of all brands can charge. By doing so Fastned is responding to the rapidly expanding number of electric cars on the road. Almost all major car manufacturers have announced electric cars with a range of 200km to 500km to be introduced in the next few years.

Fastned has decided to transfer its listing to Nxchange because this European stock exchange fits well with the European expansion plans of Fastned. Nxchange operates under license of the AFM as a regulated market (just like Euronext). The transition to a regulated stock exchange will allow more parties to invest in Fastned. Also, Fastned expects that it will become easier to raise capital and that the liquidity of its certificates of shares will increase.

Co-founder of Fastned Bart Lubbers: "Fastned wants to grow rapidly and this requires capital. The new stock exchange Nxchange is the right platform to get this done. The regulated character makes it possible for institutional investors to invest. That's great, because an investment in Fastned is an investment in sustainable infrastructure; exactly what many investors are looking for at this moment."

Nxchange director Marleen Evertsz: "We are pleased with Fastned as the first listing on Nxchange. We have developed this stock exchange exactly for this type of company that has a large community,

ambitious growth plans, and seeking funding. Via Nxchange they can approach and develop their own community to raise capital, whereby Nxchange ensures that security and transparency are guaranteed in a regulated environment.”

ÜBER FASTNED.DE

Fastned baut und betreibt das weltweit erste Netz von Schnellladestationen für Elektroautos entlang den Autobahnen. Hier können alle Stromer in 20 Minuten aufladen. Es ist Fastned's Vision allen Elektroautofahrern europaweite Freiheit zu gewährleisten. In den Niederlanden sind bereits 50 Fastned-Stationen betriebsbereit. Fastned plant, seine Schnellladenetz an das übrige Europa zu erweitern.

Die Realisierung eines solchen Schnellladenetzwerks ist eine Reaktion auf die schnell wachsende Zahl von reinen Elektroautos. Automobilhersteller wie [Tesla](#), [Audi](#), [Volvo](#), [Aston Martin](#), [BMW](#), [Nissan](#), [Mitsubishi](#), [Porsche](#), [Volkswagen](#), [Mercedes](#), [Ford](#), [General Motors](#) and [Renault](#) investieren Milliarden Euro in die Entwicklung und Produktionskapazität für reine E-Mobile. Mit der steigenden Anzahl der Elektroautos steigt auch die Nachfrage nach qualitativer Ladeinfrastruktur. Fastned antwortet auf diese Nachfrage mit dem Bau der "Tankstelle der Zukunft". Co-Gründer und CEO Michiel Langezaal: "Wir sind die Shell der Zukunft, aber unsere Energie kommt von der Sonne und dem Wind."
