Soverin launches Soverin Suite: a privacy-first alternative to Microsoft 365, hosted entirely in the Netherlands

Amsterdam, 17 November 2026 – Soverin officially launches Soverin Suite today, a digital workspace platform for small and medium-sized organisations, freelancers and consumers who want to work without relying on US Big Tech companies. Soverin Suite brings together email, documents, spreadsheets, presentations and collaboration tools in a single European environment, with privacy, digital sovereignty and sustainability at its core.

With Soverin Suite, Soverin takes the next step in its mission to give businesses, governments and non-profit organisations greater control over their digital infrastructure. To achieve this, Soverin combines its email services with Nextcloud's open-source software. The solution is based on the European Euro-Office initiative, developed as an open and sovereign alternative to Microsoft Office and Google

Workspace. Soverin has been providing secure, privacy-focused email services in the Netherlands since 2014 and is
now expanding its offering into a complete digital workspace with the introduction of Soverin Suite.

Data stays in the Netherlands

A key distinguishing feature of Soverin Suite is that its Nextcloud services are hosted by sister company Greenhost. This ensures that data remains in the Netherlands and is subject to European laws and regulations. Organisations gain greater control over their data while reducing the risks associated with foreign jurisdictions and unauthorised access to business information. Soverin also holds ISO 27001, ISO 14001 and ISO 9001 certifications and complies with NIS2 requirements.

At a time when more organisations are questioning their dependence on US cloud providers, Soverin Suite offers an alternative that reflects European values of privacy, transparency and digital autonomy. Soverin Suite follows the same principles that have established Soverin as a privacy-focused email provider: no tracking, no advertising, no data mining and full transparency about where data is stored and processed.

European technology for European organisations

The underlying technology behind Euro-Office has been developed by a coalition of European technology companies and open-source organisations, including Soverin. Together, they are creating an alternative for organisations looking to embrace European technology, European values and European control over data.

Diana Krieger, CEO and co-founder of Soverin, says: *"Dutch consumers and SMEs deserve a digital workspace where privacy is not a premium feature, but a fundamental right. With Soverin Suite, we offer a fully fledged European alternative that allows users to stay in control of their data, strengthen their*

digital independence and choose a sustainable, future-proof solution. We believe that digital sovereignty is not only essential for innovation, security and trust, but also a fundamental democratic right."

Alongside privacy and digital sovereignty, sustainability plays an important role. By working with Dutch infrastructure partners and choosing a transparent European cloud architecture, Soverin Suite contributes to a more sustainable digital ecosystem. Organisations not only gain greater control over their data but also make a conscious choice for a future-proof digital environment.

Part of The Sharing Group

Soverin is part of The Sharing Group (TSG), the Dutch group of companies behind brands including Mijndomein, MyWheels and EnergyZero. Within TSG, creating value for society is just as important as financial returns. This vision closely aligns with Soverin's mission to develop digital services that genuinely serve users rather than exploit their data.

About Soverin

Soverin is a privacy-first email provider based in Amsterdam. For more than a decade, Soverin has been developing future-proof email technology that gives consumers and businesses full control over their inboxes. The platform is built by a team of email experts and runs on its own servers in the Netherlands. With ISO certifications (27001, 14001 and 9001) and full NIS2 compliance, Soverin combines security, digital sovereignty and ease of use in a single scalable solution.

About The Sharing Group

TSG is een familie van tech bedrijven op het gebied van online, energy en mobility. Begonnen vanuit Nederland breidt de organisatie gestaag uit naar de rest van Europa. Altijd en overal vanuit hetzelfde vertrekpunt: meer social impact, minder impact op het milieu. TSG doet dat vanuit verschillende creatieve hubs door heel Nederland, van Rotterdam en Almere tot Amsterdam. Check website
