Allygn announces a Titanium version of the EdelMü taillight.

Berlin/Amsterdam – For immediate release – Allygn, the Berlin framebuilder-owned and run company, announces today the release of a Titanium version of its popular EdelMü taillight.

If you have been to any of the many handmade tradeshows around the world, you have seen the EdelMü taillight: it seamlessly integrates into the bike design, while allowing you to add a dynamo rear light to the bike build, matching the iconic design of the famous SON Edelux headlight with the high-tech internals of the Busch & Müller Mü.

Designed by Allygn's owner and head designer, Flo Haeussler, the light was conceived after Flo's constant chase of design and function as key elements of every component.

Now Haeussler wanted to go a step further and substitute the robust CNC-machined aluminium for Titanium.

▲ DSCF0455 - Kopie.JPG

The result is probably one of the few Titanium bike lights on the market that can also run on a dynamo.

Specs

- Sleek design matches the iconic SON Edelux headlights
- Busch & Müller electronics with capacitors for long stand light duration
- M6 direct braze-on mount and classic ring mount option available
- Titanium housing with great side visibility due to safety cut-outs and extreme lightness due to aerospace material.
- Comes with 6V AC dynamo internals, but 5-15V DC Mü internals can be fitted too
- The ring mount version works perfectly with Drust Cycles' rear light mount
- Frame builder braze-ons available
- Diameter**:** 20.6 mm (plastic holder)
- Length**:** 30.2 mm
- Weight**:** including uncut cable and M3 bolt 28gr

Materials

Fully CNC-machined titanium housing, POM ring mount, M5 and M4 stainless steel bolts with black zinc-nickel plating.

Just 30 lights in this first batch.

About Allygn

The brand name ALLYGN is a wordplay of “ally”, which refers to the needed communal support required to achieve a goal, and “align,” which is a term used in framebuilding to make frames straight. Allygn is owned and run by Flo Haeussler, framebuilder and founder of Fern Bicycles.
Allygn components aim for a fully integrated bicycle design, where every part blends seamlessly into each bike's overall concept, both functionally and aesthetically.
ALLYGN is a true framebuilder-owned and run company.
