## Lazer Coyote: adapt to all surroundings

The all new Lazer Coyote MTB helmet removes complexity, providing a pure experience. No frills, only thrills.

Immediately standing out is the Coyote's large visor, which protects you from sunlight and low hanging branches. The contrast color bottomshell is introduced to provide a clean premium finish and adds protection against wear and tear. Also, with noticeable extended shell coverage on all sides and EPS impact protection, it guarantees safety and peace of mind when riding, while still keeping a low fitting profile.

The whole helmet is comfortable to wear thanks to the Turnfit Plus fit system which provides swift 360 degree horizontal and vertical adjustments. This system can be combined with an optional rear LED light to match safety with comfort. Furthermore, twenty-one strategically placed inlet and exhaust vents provide an optimized airflow to keep your head cool when cranking out that maximum effort.

Everything combined provides a very light and versatile helmet that is ready for all types of rides, from tarmac over tundra to trail.

Specifications:
