Cloud Gaming Platform Shadow Ships Ghost, the Perfect Way to Experience High-End Games on Your TV

Hardware Designed To Enhance In-Home Gaming Experience

MOUNTAIN VIEW, California, February 27, 2019 – Shadow, the technology company redefining what it means to use a gaming computer, today announced the arrival of Ghost, the device designed for consumers who want the best Shadow experience on their televisions. Shadow Ghost is the perfect way to bring a high-end gaming computer to TVs, and is small, stylish, and totally silent.

Built from the ground-up for modern living rooms, Ghost has HDMI 2.0 to support 4K resolution at 60Hz or 1080p at up to 144hz, Wi-Fi, bluetooth, and consumes 30 times less energy than an equivalent traditional PC. The device also has a unique compact design to fit nicely into any gamer's television setup.

The Shadow service transforms any Internet-connected device with a screen into a powerful, full-featured and always-upgraded gaming computer, optimized for the true gamer. The platform liberates gamers from expensive hardware and gives them what they truly want and need: access to a powerful top-of-the-line computer that is continually updated with industry-leading specs at a low monthly price.

“From the beginning, Shadow has always been about adding to the gaming experience, and the purpose of Shadow Ghost is to take that mission to the next level,” said Shadow co-founder Asher Kagan. “Paired with the Shadow platform, the Ghost gives owners the ultimate gaming experience on their big-screen TVs.”

Created for a digitally native generation that's defying ownership, Shadow transfers the most powerful components of a gaming PC into the cloud to create the most powerful gaming platform that is always accessible and updated.

Shadow Ghost's introduction comes at a busy time for Shadow, having entered strategic partnerships over the past few months with influential tech giants including Charter Communications and Ubisoft's Nadeo Studios. In addition the company teamed up with award-winning esports group Team Envy as it continues to expand its foothold in the market. The company also just opened a new data center in Chicago expanding its footprint further across the Midwest and extending coverage to 37 continental states.

Users can access Shadow on any desktop PC, laptop, Mac, tablet, smartphone or smart TV with the dedicated Windows, MacOS, iOS, and Android apps. Ghost is now available for \$139.95. For more information, visit <https://shadow.tech>. Follow Shadow on Twitter and Facebook

About Shadow:

Shadow was founded in France in 2015 to design and develop the future of the PC, with a simple vision: free users from the constraints of physical hardware by giving them access to a powerful, cloud-based computer.

Shadow is a high-performance PC based entirely in the cloud. This ground-breaking service provides access to a fully featured high-end Windows 10 computer, via any Internet-enabled device, including a laptop, tablet, and smartphone. Free from hardware failures in Blade's secure data centers, Shadow puts an end to obsolete devices, thanks to regular, no-cost updates of cutting-edge components.

ABOUT SHADOW

Blade was founded in France in 2015 to design and develop the future of the PC, with a simple vision: free users from the constraints of physical hardware by giving them access to a powerful, cloud-based computer.

Blade's first product, Shadow, is a high-performance PC based entirely in the cloud. This ground-breaking service provides access to a fully featured high-end Windows 10 computer, via any Internet-enabled device, including a laptop, tablet, and smartphone. Free from hardware failures in Blade's secure data centers, Shadow puts an end to obsolete devices, thanks to regular, no-cost updates of cutting-edge components.
