WHAT IS DIETBITCOIN?

dietbitcoin is a faster, lighter alternative to bitcoin. dietbitcoin uses peer-to-peer technology to operate with no central authority or banks; managing transactions and the issuing of dietbitcoins is carried out collectively by the network. **dietbitcoin is open-source; its design is public, nobody owns or controls dietbitcoin and everyone can take part.** Through many of its unique properties, dietbitcoin allows exciting uses that could not be covered by any previous payment system. dietbitcoin uses a blockchain which is not controlled by any third party nor government agency. It is open source which allows for increased security. All transactions are recorded on the blockchain, which is decentralized and spread across a global network of computers.

DIFFERENCES BETWEEN DIETBITCOIN AND OTHER COINS

Getting started with dietbitcoin core is fast and much easier than Bitcoin core. dietbitcoin is a custom fork off of the main Bitcoin network. Bootstrapping dietbitcoin is much faster than Bitcoin, and greatly reduces overhead costs and headaches that are typically associated with running a Bitcoin Full-Node. Transfer costs for dietbitcoin are less than Bitcoin, while transfer speeds are faster. Furthermore, the dietbitcoin platform, and its well-timed launch enables the open source community to have greater flexibility when choosing future network enhancements and innovative protocol changes.

dietbitcoin (DDX) is Roberto Escobar's gift to the world.
