

Jedlix appoints Alain D. Bandle as Chairman of the Supervisory Board

Rotterdam, [30. January 2018] – Jedlix, the e-mobility smart charging company launched by Eneco Group, today announced that its shareholders have appointed Alain D. Bandle as Chairman of the Supervisory Board, effective immediately.

Following the recent acquisition by Groupe Renault of a 25% share of Jedlix, the company prepares itself for a fast international expansion. Jedlix's app enables users to charge their electric cars during periods when there is ample supply of green electricity, for example during the night when the wind is strong. As this electricity is cheaper during these periods, this app is profitable for the users.

Alain D. Bandle is a trilingual Swiss independent Non Executive Director and senior advisor with extensive global commercial experience and a track record to create and implement business strategies that drive growth. He has held leading positions at a number of companies including Procter & Gamble, Hewlett Packard, VEBA (now Eon) and Dell as well as at several start-ups. Mr. Bandle held non-executive director roles in Germany, Switzerland, France, Austria and USA in multiple industries.

"I am excited to join Jedlix , a visionary company with the right partners to become the leading software platform for smart and sustainable charging. I feel honored to lead Jedlix into the next growth phase" - said Alain D. Bandle

"With Alain Bandle on board, Jedlix can count on his extensive global commercial experience and a track-record to position software and technology companies for successful international growth" - said Ruben Benders, Managing Director of Jedlix.

ABOUT JEDLIX

About Jedlix

Jedlix manages the charging of your electric car based on the balance between production and consumption of renewable energy. By selecting the optimal charging moments, we increase the share of renewables in the energy mix. We charge your car with renewable energy when the prices are at their lowest and we share the financial reward generated with you. Driving an electric car just got even better!

Since april 2016 we make it possible for electric vehicles to better use the supply of renewable energy while charging. We launched our smart charging app for both iOS and Android, connecting over 1000 public charge stations for all full electric and plugin-hybrid cars.

We are proud to have *Tesla, Renault, BMW* and *Eneco* on board as valuable partners.
