

Jedlix launches international Smart Charging services

Paris, 11 October 2018 – Market leader Jedlix now goes international with its Smart Charging solutions. Electric car drivers in multiple countries can benefit from automated charging at the most favourable times while, at the same time, contributing to driving on sustainably generated electricity. Today, Jedlix signs an agreement with Renault and energy provider Total Spring for the launch of ‘Z.E. Smart Charge’ in France.

Smart Charging services

Independent Smart Charging specialist Jedlix has offered its services for electric cars in the Netherlands since 2016. While taking the departure times of drivers into account, an intelligent app is used to halt the charging process temporarily when there is a risk of having a shortage of electricity supply on the grid. When there is a surplus amount of electricity – for instance when there is a lot of wind or sunshine – the charging will be speeded up.

With its over-the-air and connected car based technology the Jedlix services promote the consumption of sustainable energy. Independent of charging equipment and drivers receive a financial reward in return.

International roll-out starts in France

After the Netherlands, now also available in France with the Renault Z.E. Smart Charge App. People who drive the Renault Zoe, the best-sold electric car in France, can use the service in combination with a Total Spring green energy contract.

Jedlix is preparing for a wider range of services for the French market, which will include other car brands as well. After this, the Smart Charging solutions will also be launched in other countries that have a high electric mobility level.

"After a successful launch of Jedlix in the Netherlands, we have entered a new phase with this collaboration between Jedlix, Renault, and Total and in which we will continue to build on our leading position in the area of Smart Charging in Europe."

— Ruben Benders, CEO Jedlix

Paris Motor Show

The collaboration was announced at the Paris Motor Show earlier today. Here you will find a link to the announcement from our partner Renault.

About Jedlix

Jedlix is an independent aggregator offering a direct over the air smart charging solution for drivers of electric vehicles. As market leader, we are active in The Netherlands since 2016 and will be soon available in other European countries. We manage the smart charging of electric cars based on the balance between production and consumption of renewable energy. Jedlix charges electric vehicles with renewable energy when the prices are at their lowest and it shares the financial reward generated with our customers. By selecting the optimal charging moments, Jedlix increases the share of renewables in the energy mix. We launched our free smart charging app for both iOS and Android.

We are proud of our partnerships with *Tesla, Renault, BMW, Eneco and many more.*
