Time to test ride: VanMoof reveals the all-new S5 & A5 are ready to take to the streets

From August 15, riders can take 2022's most anticipated e-bikes for a spin around their city.

Amsterdam, August 15, 2022 – Today, VanMoof reveals that the VanMoof S5 & A5 are available to test ride in Amsterdam and Berlin (with test rides to be available in other cities across the globe throughout August and September).

Following a record-breaking launch in April that achieved unprecedented website traffic and an international buzz, VanMoof's latest e-bikes are now ready to take to the streets. Riders can test ride both models of the brand's latest generation of groundbreaking city e-bikes, the VanMoof S5 & A5.

Test ride schedule

While Amsterdam and Berlin are the first two cities to launch test rides, riders will be able to book test rides in London, Paris, Hamburg, Munster, New York City, and San Francisco later in August and September.

Test rides will be available in further cities across the world through September and October.

New bikes, new frames

Both new 5-Series frames offer riders the most easy and accessible way to ride a VanMoof. The S5 is a refresh of the unmistakable VanMoof straight frame with slightly smaller wheels. The high riding position remains the top pick for controlled cruising. The brand-new A5 model has a lowered step-in frame, making it easy to jump on and off on nimble city rides. The all-new frame was designed with people new to biking in mind.

Engineered to perfection

The VanMoof S5 & A5 feature a re-engineered ultra-silent and powerful motor, a long-range battery, an extra powerful Boost button, and all the latest VanMoof anti-theft tech. The new handlebar interface made of LED Halo Rings communicates real-time feedback on speed, battery levels, unlocking and more. The all-new lowered step-in A5 frame opens the opportunity for more riders worldwide to have their first e-bike experience. The VanMoof S5 & A5 come in a gray finish and are available to buy for the introductory price of £ 2498.

How to book a test ride
