

## JEE-O completes line with touchless design.

The latest JEE-O launch proves that functionality and design can go hand in hand: the electronic wall basin tap. With this new touchless design, JEE-O responds to market demand, specifically from project developers and architects.

### ***Models***

The electronic wall basin mixer has a 90-degree outlet and is already available in the **slimline series**. The mixer taps come in brushed stainless steel, structured black, bronze and gold. The subtle and minimalist design of the slimline series makes it easy to combine with the other JEE-O designs.

### ***More to follow***

And there's good news for those wanting to stay in the same line. In the last quarter of this year, the touchless wall basin tap will also be introduced to the **soho** and pure **series**. The soho electronic wall basin mixer will be available in stainless steel RAW and hammercoated black. And the pure series will be extended with an electronic wall basin tap in brushed stainless steel, bronze and gold.

### ***So far nothing new, but fancy***

The technology is obviously not new. It is hygienic and water efficient and perfectly reflects the current zeitgeist. But the fact that, besides functionality, the high-end design remains intact is unique. And that of the high-quality materials like stainless steel. Stunningly beautiful and super strong.

### ***Technology in a tap***

JEE-O thus responds to demand from the B2B market. Various project developers and architects are incorporating the JEE-O product designs in their designs. The fact that this technology has now also been incorporated in 3 JEE-O series completes the design. Sensor taps are ideal for public spaces, toilet areas, hotels, office environments and much more. Wherever a lot of water is used, where hygiene is important, but above all, where a luxurious design concept is required.

JEE-O We energise you!
