

Lizy partners with Fixico to complete its fully digital leasing experience

Digital-first leasing innovator Lizy partners with Fixico to extend its AI-powered service to body repair, launching in Belgium with ambitions to scale across Europe.

Brussels, 13 May 2026 - Lizy, the digital-first innovator in SME leasing, and Fixico, Europe's digital platform for car repair management, today announce a strategic partnership to manage all body repair cases for Lizy's Belgian fleet through Fixico's platform and nationwide network.

Lizy has built its reputation on a fundamentally different model from traditional leasing companies: AI-powered, fully digital and focused on used vehicles for small and medium-sized businesses. Today, Lizy is the number-one provider of used EV leasing in Belgium, with 84% of new contracts signed in 2025 being electric. Where legacy players rely on manual processes, Lizy delivers a leasing experience that is faster, cheaper and more flexible.

As its fleet grows, the need for a repair process that matches that ambition grows with it. From now on, every body repair case, including combined body and glass damage and towing, will be managed end-to-end through Fixico's platform. Lizy's drivers, fleet managers and repair partners will operate from a single digital environment, with full visibility at every step. Towing cases are also handled through the same platform, meaning one point of contact for all repair cases, regardless of severity.

Under the agreement, Fixico provides Lizy with access to its network of more than 500 vetted body repair specialists across Belgium and intelligent shop matching based on location, availability, EV brand certification and defined service level agreements. For Lizy's customers, this means a digitalised repair journey that eliminates the friction of traditional inspections and back-and-forth communication. Remote damage assessment and real-time status updates transform what was an outdated offline process into a seamless experience.

While the partnership launches in Belgium, both companies have clear international ambitions. Fixico operates in 10 countries across Europe, including the Netherlands and France, two markets where Lizy is actively growing.

"At Lizy, we're all about a fully digital, AI-powered user experience. Our client base is made up primarily of entrepreneurs. We know that they need their vehicles on the road, not in a queue. Repair management is a key part of making that promise. For a while now, we've been keen to make that experience easier for our customers. With Fixico, we found a partner that shares our digital-first mindset and has the technology and network to back it up." - Sam Heymans, CEO & Co-Founder, Lizy.

"Lizy and Fixico share the same belief: that technology can fundamentally transform industries that have relied on manual processes for too long. Lizy is growing fast and sets a high bar for driver experience. Scalable, cross-border, fully digital service: that is the future we are building together. Lizy is exactly the kind of partner we love to work with, and we are proud to support their ambition, in Belgium and wherever they go next." - Derk Roodhuyzen de Vries, CEO & Co-Founder, Fixico.
