

Dolby On at a Glance

Building on 50 years of innovation, Dolby On is a free iOS and Android application designed to make recording and live streaming sound and video with unparalleled audio quality incredibly simple, using nothing but your device. Dolby On empowers creators to make their statement with amazing sound quality, anytime and anywhere.

Why Dolby On?

The nature of content creation has fundamentally changed with the prevalence of mobile devices that carry powerful camera and microphone technology. Creators, of all levels, no longer need expensive equipment or expert skill sets to capture and create share-worthy content.

That said, the innovations in mobile device cameras have far outpaced the innovations in audio technology and, especially for music creators, the compromise between recording quickly and easily is still a daily struggle.

Dolby On delivers powerful audio processing to your phone and tablet with one-tap recording, making it easy to capture amazing sound quality with only your device. Creators can now record and livestream, both audio and video, with exceptional Dolby sound.

- Capture high quality shareable content for your fans
- Record ideas and demos for yourself or to share with your collaborators
- Record rehearsals or the gig for your archive
- Grab sounds and inspirations in the field to sample in your next creation
- Use the iOS app to go live and stream to Facebook Live and Twitch

How it Works

Dolby On analyzes your music and automatically applies just the right touch of EQ, compression, noise reduction, stereo widening, and more.

Key Features

1. **Hear the Details:** Lose the background noise with Dolby's original music innovation: noise reduction. No more electrical hum, amp buzz, or fan noise.
2. **Stand Out:** Compression and pro-limiting optimize your volume — making you stand out on platforms like Facebook, SoundCloud, Instagram, and more.
3. **Add Shape and Depth:** Dolby On's proprietary dynamic EQ automatically adapts to your music, and stereo widening expands your sound beyond mono - allowing you to hear every instrument.
4. **Make It Your Own:** Use our custom designed Styles- like photo filters for audio- to color your sound, or go deeper with bass, treble, boost, and track trim controls.
5. **Sound Great, Simply:** Powerful and advanced audio processing with the touch of the record button.

Target Audience

Creators, primarily in music, vlogging, and podcasting that:

- Use their mobile devices as a part of their creative process
- Value great sound
- Capture content for themselves, for sharing with collaborators, or for sharing with their social media audience

Availability and Pricing

Free for iOS and Android globally.
