Tencent Video to Stream World's First Live Event in Dolby Vision

2018 Super Penguin Ultimate Game will be available through Tencent Video's OTT Service in Dolby Vision to consumers in China

SAN FRANCISCO and BEIJING, Sept. 13, 2018 (GLOBE NEWSWIRE) -- Dolby Laboratories, Inc.(NYSE:DLB) and Tencent (SEHK:700) announced today that the 2018 Super Penguin Ultimate Game will be streamed live in Dolby Vision HDR on September 15 via TencentVideo and will be accessible to Tencent Video Super VIP users in China with select Dolby Vision-enabled TVs. This makes Tencent Video the world's first OTT content service provider to deliver a live Dolby Vision experience.

The 2018 Super Penguin Ultimate Game is Tencent's third annual celebrity basketball game. This year, former NBA players Tracy McGrady and Chris Bosh will join seventeen of China's top celebrities and two Chinese professional basketball players. The game will also feature a halftime performance from Rocket Girls 101, an eleven-member pop group from the Chinese reality show Produce 101.

"Tencent Video is transforming the way consumers enjoy live entertainment by bringing Dolby Vision to their live streaming service," said Giles Baker, Senior Vice President, Consumer Entertainment Group, Dolby Laboratories. "With Dolby Vision, basketball fans watching Tencent's Super Penguin Ultimate Game will feel as if they are sitting courtside as they watch the two teams face off from the comfort of their home."

"Tencent strives to continuously enhance the viewing experiences of our customers, which is why we decided to partner with Dolby," said Billion Zhao, General Manager, OTT Department, Tencent Video. "We chose to deliver this year's Super Penguin Ultimate Game in Dolby Vision to bring viewers closer to the action than ever before."

Dolby Vision transforms your viewing experience with ultra-vivid picture quality. When compared to a standard picture, Dolby Vision can deliver colors never seen before on a screen, incredible contrast, highlights that are up to 40 times brighter, and blacks that are 10 times darker. The result is a refined, lifelike image that will make you forget you are looking at a screen.

The game will be delivered live in Dolby Vision using an ATEME Titan Live encoder.

About Dolby Laboratories
