

Superminds Academy – Mindsee To Launch Blindfold-Based Perception Workshop In Austin This Fall

Superminds Academy - MindSee brings blindfold-based perception exercises to Austin, inviting families to discover that focus and intuition can be trained like a muscle.

Austin, Texas (Aug. 24, 2026) – At Superminds Academy - MindSee, superpowers feel within reach. The interactive family workshop co-founded by neuropsychologist Dr. Ann DeSollar and educator Elena Restrepo, and presented by Fever, will make its Austin debut on October 10. The 75-minute experience, designed for children ages 4 through 16, invites kids and their parents to explore focus, communication, and intuition through blindfolded exercises, sensory games, and collaborative challenges, turning attention training into playful, hands-on activities that encourage concentration and connection. MindSee will be located at the Omni Austin Hotel Downtown. Tickets are now available on the Fever app and superminds-academy.com.

"Seeing through a blindfold may sound impossible, but children are capable of much more than we often realize. At Superminds Academy – MindSee, children are given the opportunity to explore this remarkable ability in a supportive environment that encourages curiosity, experimentation and discovery. Along the way, they build confidence and develop a deeper awareness of how they perceive and process the world around them—all while sharing the experience with their parents."

Dr. Ann DeSollar, Mindsee co-founder and neuropsychologist.

A Hands-On Workshop Built Around Focus, Communication, and Trust

Participants move through a progression of activities while blindfolded, beginning with simple 2D exercises involving colors, patterns and numbers before advancing to 3D challenges using cups, tactile objects, sorting games and fine-motor tasks. As the exercises become more complex, participants are encouraged to rely less on sight and more on their ability to process information, communicate clearly and work together, while having fun!

A Meaningful Shared Experience for Families

Parents are not spectators, and participate alongside their children through each challenge, particularly during blindfolded exercises where trust, observation, and teamwork become essential. Led by trained facilitators, the experience creates a playful, supportive environment free from screens and distractions, where families can slow down, challenge their perception and discover new ways of solving problems together.

With its combination of immersive exercises, guided teamwork, and hands-on challenges, Superminds Academy - MindSee creates memorable moments for both children and parents alike, encouraging families to engage, communicate, and discover new ways of working together.

Superminds Academy – MindSee will be open from **October 10** to **November 7**. For tickets, opening hours and the latest visitor information, please visit the Fever app or superminds-academy.com. About Mindsee

MindSee is a pioneering training program that teaches people to see through blindfolds, reawakening natural perceptual abilities while enhancing cognitive flexibility, focus, neuroplasticity and confidence. The structured, science informed curriculum was created by neuropsychologist, Dr Ann DeSollar, and educator, Elena Restrepo. MindSee trains adults and children online and in person and has a certified teacher training program. Featured on Telepathy Tapes, Ted, Columbia University and the World Economic Forum at Davos, MindSee is leading scientific research with EEG data to understand the neural correlates which allow you to see through a blindfold. MindSee - It's not magic, it's a muscle.

About Fever

Fever is the world's leading tech platform for discovering culture and live entertainment, inspiring over 300 million people last year to discover the best experiences in over 40 countries. With a mission to democratize access to culture and entertainment in real life, Fever inspires users to enjoy unique experiences and events—from immersive exhibitions and sports to interactive theatrical performances, concerts, and festivals—while empowering its partners with data and technology to develop and expand new experiences worldwide.
