A feel for speed

At Canyon, we know how to build the most innovative and inspiring bikes. We also know the importance of a seamless connection between rider and machine when laying down your hardest efforts. But without a reliable platform to build on, how can you summon the speed you need to succeed? We partnered with our athletes and leading technology innovators to develop race-ready cycling shoes that unite foot and pedal like never before, giving you a whole new feel for speed.

The Shoes

TEMPR CFR ROAD

Our pro-level road shoe is stiff where you need it, and soft where you want it. Achieving a perfect mix between speed and comfort, so you can power your fastest rides for longer.

TEMPR CFR OFF-ROAD

All-out power for your fastest off-road endeavours, complete with best-in-class traction in both wet and dry conditions.

Product & positioning

What's more, a full-length carbon plate and Solestar[®] insole provide a lightweight and responsive base that's ready to transform explosive efforts into pure power for your drivetrain.

Combining sock-like construction with Canyon engineered fit and BOA[®] closure technology, we successfully fused soft with stiff to give you a whole new feel for speed.

TEMPR CFR

What makes it CFR?

Canyon Factory Racing (CFR) represents over 30 years of knowledge, innovation, and dedication – and our Tempr CFR Shoes are no exception. We partnered with pro riders and the industry's leading designers to produce a Canyon shoe that's fit for champions.

Zoe Bäckstedt (Canyon//SRAM Racing) winning the U23 Cyclocross World Championships 2024 in the new Tempr CFR Off-Road shoes

TEMPR CFR

What makes it Tempr?

We all want more speed. But it only works if we can sustain it. Without comfort, fatigue sets in – draining our speed as we lose the ability to drive power into our pedals.

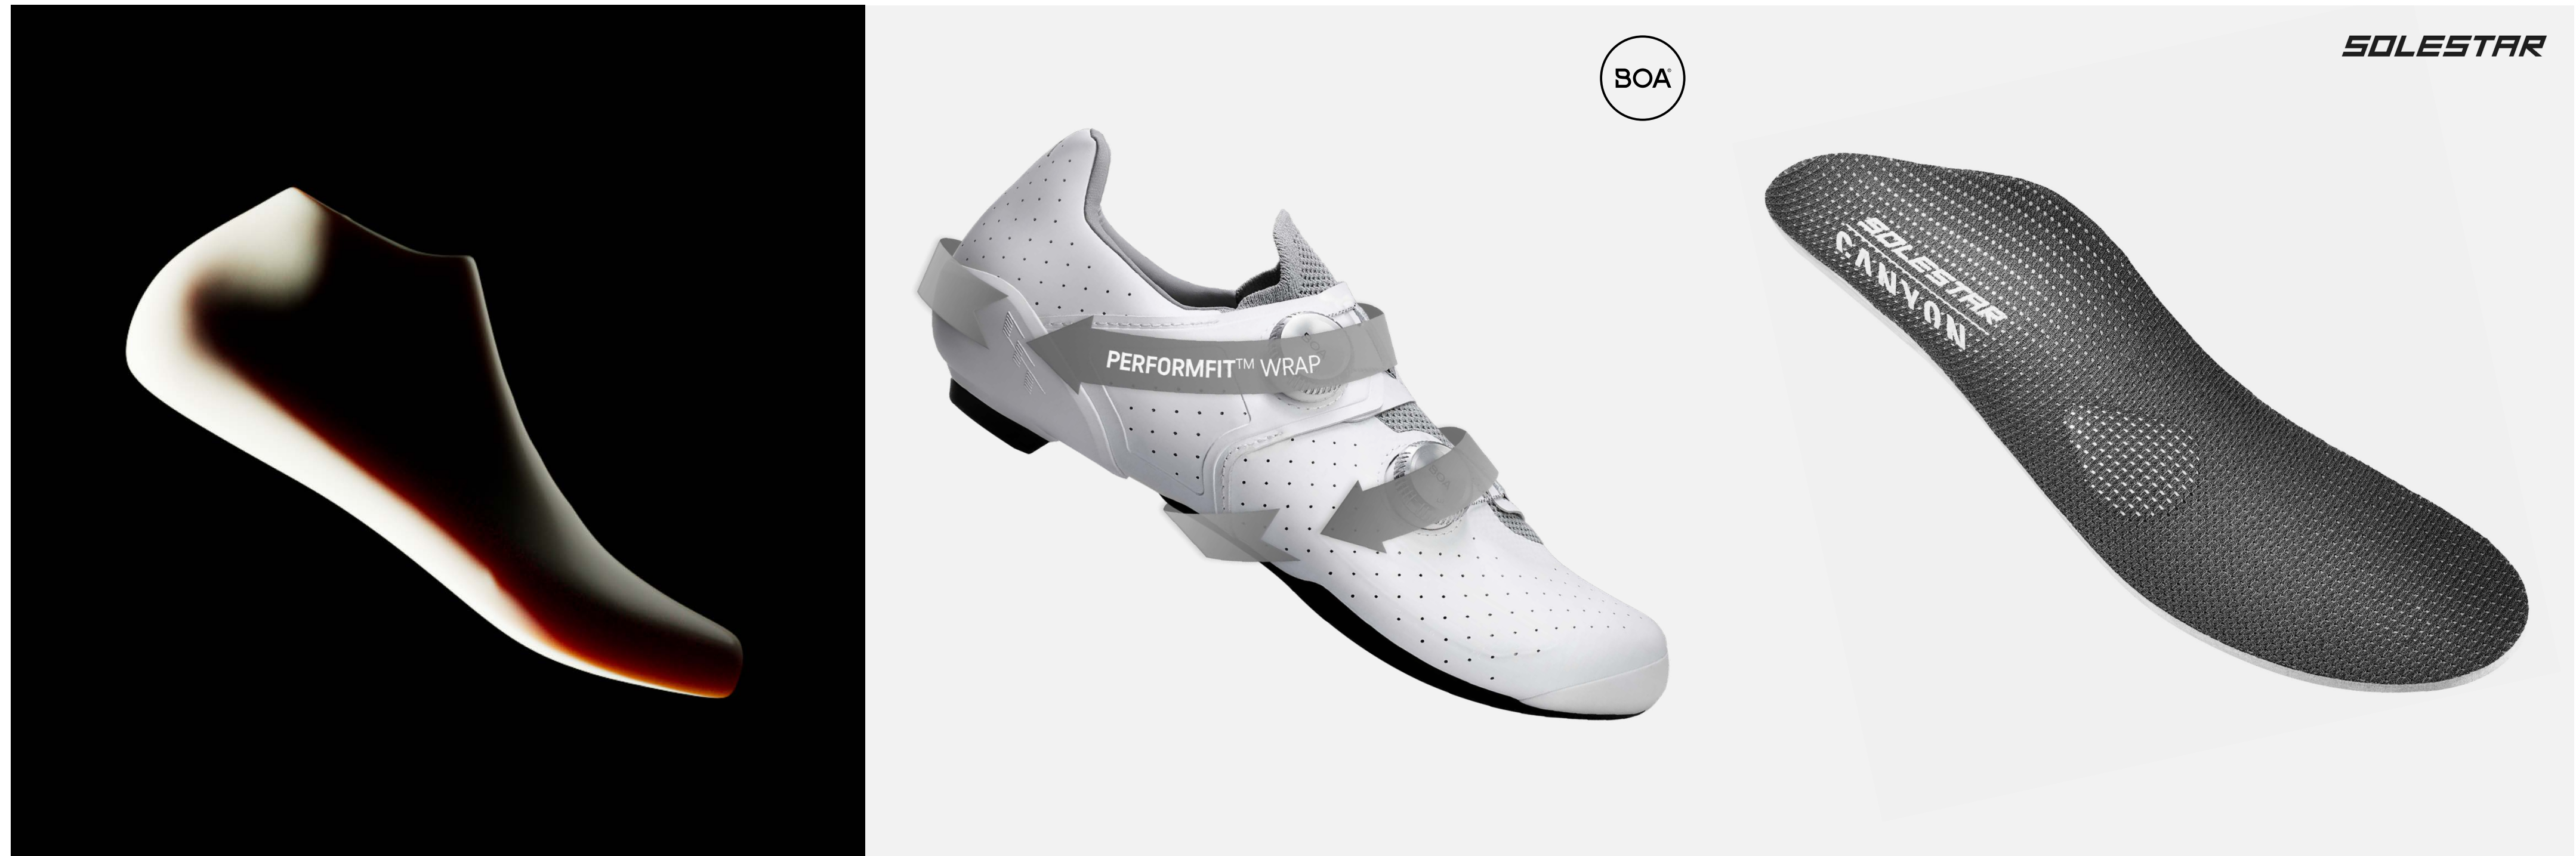

The all-new Canyon Tempr CFR shoes strike the sweet spot between speed and comfort: giving the forefoot room to flex, holding the midfoot firm, and locking in the heel.

It's a fusion of soft and stiff, embracing the foot to provide a platform for fluid, direct pedal strokes. These shoes deliver exceptional performance and unrivalled comfort, all while empowering riders to push their limits without tempering their ambition.

Key features

PureFit360™

Boosting power transfer, without compromising on comfort. The Canyon engineered PureFit360™ last is developed based on athlete data. The last ensures a sculpted, supportive fit – leaving room for natural toe splay so you can drive stronger pedal strokes for longer.

PerformFit™ Wrap

A floating strap system developed in collaboration with BOA® encircles your heel and arch to lock down your foot and eliminate unwanted movement. Plus, two anodised aluminium BOA® Li2 dials offer a highly efficient closure that's both durable and easily replaceable.

Custom Solestar® insoles

We worked with leading sports scientists to integrate the Solestar® concept of neutral foot positioning into the construction of our shoes – allowing your foot to move naturally for maximum power transfer without sacrificing comfort.

Key features

CFR carbon plate

A full-length internal carbon plate and custom insole provides a lightweight platform for maximum power transfer. A 6mm stack height brings your foot closer to the pedal axle for enhanced feel and control.

Adaptable stretch tongue

Made using a snug, sock-like construction, the shoe tongue offers a uniquely supportive fit that stretches to accommodate a wide range of foot shapes.

Pressure relief zones

Engineered stretch zones at the widest area of the forefoot relieve pressure under pedalling loads, leaving you free to drive your hardest efforts.

TEMPR CFR

Grip the dirt

Developed with Vibram, our Tempr CFR Off-Road Shoe uses the proprietary Megagrip™ rubber compound to optimise durability while delivering best in-class traction when your feet hit the dirt. What's more, minimum sole thickness and an open tread spacing allows mud shedding – keeping you light on your cleats.

FAQ

How are the pressure relief zones constructed?

Careful attention was paid to the upper materials with a purposeful minimisation of layers to provide compliance where you need it.

You've introduced CFR (Canyon Factory Racing) shoes. As they are intended for racing, can I use them for recreational riding too?

The Canyon CFR shoes are developed with leading sports scientists, based on athlete data. This is why they are race ready, like all of our CFR products. But they can be used for recreational riding too.

Can I use Speedplay cleats?

We do not yet have a Speedplay-specific outsole, but you can use the Speedplay pedal system with the proper adapter. There are a variety of aftermarket providers, but you may want to start with the pedal supplier Wahoo.

Will there be gender-specific models?

Thanks to the shoe's innovative fit system, we have seen high volume feet and low volume feet fit comfortably and efficiently in the same exact size.

Do you offer wide sizes?

No, but based on data from foot form analysis and athletes insights the Canyon engineered PureFit360™ last gives your foot room to splay with a wider toe box and pressure relief zones.

How does the size compare to other brand sizes?

We include specific measurements in our sizing chart and recommend you follow the instructions for sizing above to determine your optimal size.

What weather conditions can the shoe be worn in?

They can be worn in all conditions, but cold weather and rain can be tolerated even more successfully with proper shoe coverings like the Canyon Road or MTB shoe covers.

How can I replace the BOA laces and dials?

BOA® dials and wires can be repaired (watch our replacement service video on youtube).

Can I heat mold my shoes?

We do not suggest adding extreme heat to your shoes. There may be aftermarket insoles which are heat formed, but we have successfully collaborated with Solestar® to create an insole which works for a wide variety of riders.

The shoe feels both snug and roomy, how did you manage this?

BOA® Fit System's PerformFit™ Wrap evenly disperses pressure, eliminates fit discomfort and enhances power transfer while the Canyon's PureFit360™ foot-form shoe fit system and the sock-fit tongue construction boosts comfort and all-over supportive fit. In combination with the Solestar® insole, which is designed to take any foot type and return it to its natural neutral position, plus the pressure relief zones, the shoe feels snug with adequate space for the foot to expand in the heat.

How do I care for my Tempr CFR shoes?

Clean your shoes after use with a damp cloth. Watch our service video for more cleaning instructions.

How tight can I tighten the screws on my cleats?

We recommend that you follow the cleat manufacturer's guidelines. Shimano SPD 5-6NM, SPD-SL 5-6NM, Look road 5.5-6NM, Time ATAC 5NM, Time Road 4.5NM, Crank Brothers 4NM.
