Our new Aware™ scanner set

We are excited to announce the release of our new Aware™ scanner set, designed to revolutionize the way we identify sustainable materials in the textile industry.

The new scanner is equipped with the latest technology to identify the tracer in sustainable materials and ensure that they are authentic. With its easy-to-use interface and quick scanning capabilities, the new scanner set is practical and efficient. The scanner is designed to be held onto the material for a few seconds, after which it displays the results on its easy-to-read display. If a tracer is detected, the display shows a clear indication, making it easier to identify sustainable materials in the production process.

The new scanner set is a significant step towards creating a more sustainable industry and will be invaluable to brands and manufacturers in achieving their sustainability goals. We are proud to be at the forefront of this important industry development, and we look forward to seeing how our new scanner set can help drive change in the textile industry.

Together, we can create a more sustainable future, one material at a time.
