

Building skills for the future

At Chane, Learning & Development is entering an exciting new phase. With the introduction of a new learning platform and the development of a broader Maintenance training programme, the company is creating a learning environment that better reflects day-to-day operations, prepares for future workforce needs and supports long-term employability.

Over the past four and a half years, Chane has built a strong foundation for Learning & Development. The next step is making learning even more accessible and practical for its international workforce through a user-friendly platform that combines digital learning, classroom training, on-the-job coaching, terminal instructors, virtual reality and hands-on simulations. For Geeske Steeneken, who leads Learning & Development at Chane, learning is about much more than transferring knowledge.

Geeske Steeneken, Lead Learning & Development

"We've built a solid foundation. Now it's about moving from good to better, and ultimately to excellent. "

Alongside the new platform, Chane is expanding its training programme in Maintenance and Electrical & Instrumentation (E&I). The initiative responds to the growing shortage of technical professionals while creating opportunities for employees to broaden their expertise across different disciplines.

"I'm a strong believer in encouraging people to explore opportunities across the organisation and continue developing in the areas where they excel. Growth doesn't have to be vertical."

Employees will also have the opportunity to earn recognised qualifications while they work, making learning an integral part of everyday practice. By continuing to invest in Learning & Development, Chane is strengthening a culture where curiosity, ownership and safety go hand in hand, helping ensure the organisation remains agile, resilient and ready for the future.

About Chane

Chane is a leading storage, processing, and logistics partner, specializing in forward-thinking end-to-end service offerings for bulk liquid products. The company operates 21 tank terminals with a total capacity of 5,6 million cubic metres, located in 6 European countries: the Netherlands, France, United Kingdom, Spain, Portugal, and Poland. Chane forms a vital link in the supply chain for a wide range of international customers. Linking forward.
