

Sonos 27app

The Sonos app, rebuilt around how people actually use it.

Sonos 27app is Sonos's redesigned mobile app for iOS and Android, with new navigation rolling out to all customers starting September 8, 2026.

- **New Navigation:** Home, System, and Search tabs, with native swipe gestures on iOS and Android and the ability to pin favorite rooms to the top.
- **Lock Screen Controls (iOS only):** Full playback control from the iPhone lock screen and Dynamic Island, no need to open the app.
- **Virtual Volume Knob (iOS only):** Twist two fingers on the screen to adjust volume, like turning a dial.
- **Presets:** Save a set of speakers, content, and volume as a single tap you can return to anytime.
- **Siri and Shortcuts:** Trigger Sonos actions by voice through Siri, or build them into automations through the Shortcuts app.
- **Refreshed iPad Layout (iOS only):** Layouts and interaction patterns tuned for the tablet.
- **Built With the Community:** The new navigation was shaped and tested with Sonos owners, including feedback gathered from Reddit.

Availability

New navigation rolls out to all customers starting September 8, 2026. Lock Screen Controls and Dynamic Island are already available on iPhone. Presets, the virtual volume knob, Siri and Shortcuts, the refreshed iPad layout, and new system health views roll out later this fall.
