FORTY SIX

Black Inc FORTY SIX Gravel: Master Every Surface.

Built for Modern Gravel.

The Black Inc FORTY SIX Gravel wheels are engineered for the demands of today's gravel scene: high speed, rugged terrain, and wide tires. We designed this wheelset to deliver aerodynamic performance and robust durability without compromise, no matter where your ride takes you.

- **Optimized for Wide Tires:**
A generous **27mm inner rim width** perfectly accommodates tires up to 29"x2.2" (57mm), providing a superior contact patch for enhanced traction and comfort. External rim width 33mm.
- **Aerodynamic Advantage:**
The **46mm deep rim profile** and **aerodynamically shaped steel spokes**. Ensure you maintain speed on fast-paced gravel sections and paved transitions.
- **Built to Last:**
High-polished stainless steel bearings are specified for exceptional durability and long-lasting, smooth performance in all weather conditions.
- **Brass spoke nipples** chosen for their resistance to galvanic corrosion, as well as their general durability.
- **Instant Power Transfer:**
A larger freehub engagement design (30T X OS 3-PAWL) provides quick, reliable power transfer, crucial for accelerating out of corners and conquering steep, technical climbs. This was inspired with inspiration from our off-road hub platform and provides a +25% increase in engagement over our standard road hubs.

The Ultimate Gravel Wheelset.

Fast, wide, and durable. The Black Inc FORTY SIX Gravel wheelset gives you the confidence to push the limits on any terrain, combining speed and stability in one complete package.

LAUNCHING MAY 1st, 2026 on the SARANA and available separately
