

Beeline Unveils Spring 2026 Updates for Moto II: Delivering Smarter, Smoother Rides

London, UK – 29/04/26 – Beeline today announces a new suite of spring updates for Moto II, introducing rider-requested features and meaningful performance improvements designed to make every journey simpler, safer, and more enjoyable. This latest release focuses on reducing friction at every stage of the ride - from setting off to adapting on the move - while giving riders greater control over how they experience the road.

Navigation directly from Moto II

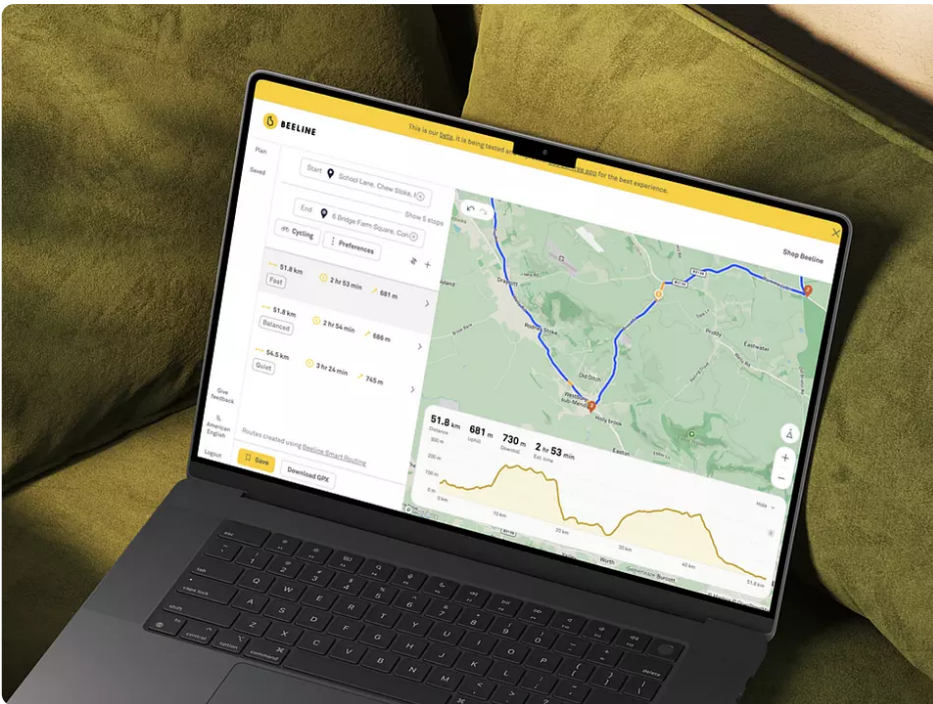

Riders can now start navigation directly from the Moto II device, without opening the Beeline app. Whether selecting a saved route or heading home, users can simply power on and select a favourite destination to navigate to. Ideal for those moments when convenience matters most, like gearing up in bad weather or making a quick departure.

▲ Navigate to a favourite destination directly from the Moto II device

Rebuilt Online Route Planner

Beeline's Online Route Planner has been significantly upgraded, with a more fluid and intuitive interface. The standout addition is drag-and-drop editing, enabling users to adjust routes simply by pulling them into shape; eliminating the need to delete and rebuild sections. This improvement makes it faster to add waypoints, refine route choices, and adapt plans, particularly for those who prefer mapping rides on desktop before heading out.

Introducing Relaxed Routing

Beeline has added a new routing profile tailored for calmer rides. “Relaxed Routing” prioritises quieter roads, lower speed limits, and less technically demanding routes. It complements existing “Fast” and “Fun” modes, offering an option suited to newer riders, those returning to motorcycling, or anyone seeking a more laid-back journey.

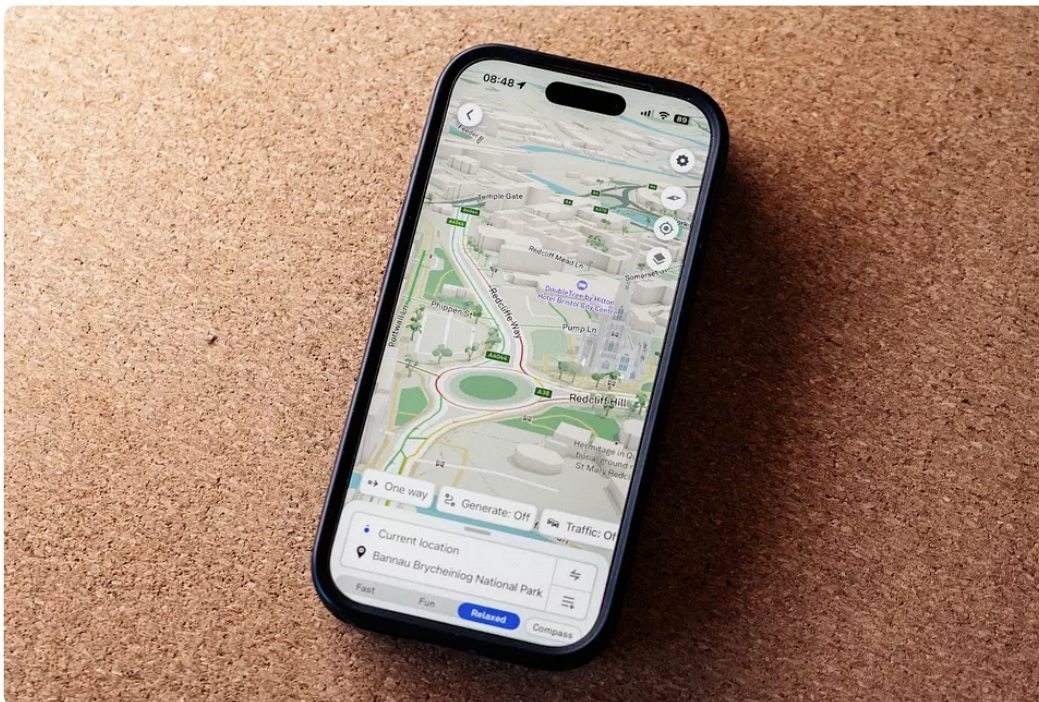

More accurate ETAs

Improvements to Beeline's routing algorithm now deliver more reliable time estimates. By better reflecting real-world riding behaviour, the updated system reduces discrepancies between predicted and actual journey times.

Live traffic information

A new Live Traffic map layer provides real-time visibility of congestion and delays. Available to Beeline Plus subscribers, this feature enhances urban commuting and longer rides by helping users make informed routing decisions on the go.

Additional coverage and language support

Beeline Smart Routing and Beeline Plus are now available in Brazil, Uruguay, Argentina and Chile. A full list of coverage can be found [here](#).

In addition to the existing availability in English and German, audio directions will now be available in French, Japanese, Spanish, Italian, Dutch, Portuguese and Czech.

Available now

All new features are available in the latest version of the Beeline app (iOS: 3.4.3806, Android: 4.2.7578), downloadable via the App Store and Google Play.

With this spring update, Beeline continues its mission to create intuitive navigation tools that let riders focus less on their devices and more on the ride itself.

END.

About Beeline

We're building a world where getting on two wheels is easy and knowing where you're going is even easier.

Our mission is simple: to make every ride safer, more enjoyable, and more connected to the world around you, wherever you're going.

Beeline exists to empower cyclists and motorcyclists with navigation tools that are intuitive, beautifully designed, and built to last. Whether it's your daily commute or a weekend ride into open countryside, we help you stay focused on the ride, not the tech.

From twisty lanes to city streets, Beeline makes space for riders to stay present, explore freely, and enjoy the journey.
