

Beeline Launches Spring 2026 Updates for Velo 2, Enhancing Route Planning and Ride Insight

London (UK) - 29/04/26 - Beeline today announces its spring update for Velo 2, introducing key improvements to route planning and ride visibility, alongside long-requested features for cyclists who plan and ride with precision.

Navigate directly from Velo 2

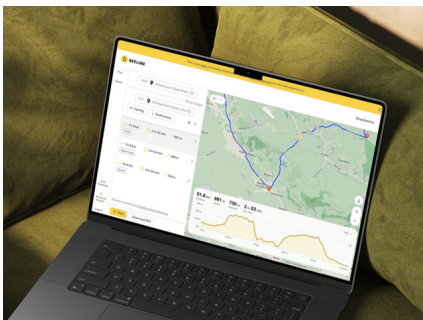

Riders can now start navigation directly from the Velo 2 device, without opening the Beeline app. Whether selecting a saved route or heading home, users can simply power on and select a favourite destination to navigate to. Ideal for those moments when convenience matters most, like gearing up in bad weather or making a quick departure.

▲ Easily navigate to a favourite destination from the Velo 2 device

Rebuilt Online Route Planner

Beeline's Online Route Planner has been significantly upgraded, with a more fluid and intuitive interface. The standout addition is drag-and-drop editing, enabling users to adjust routes simply by pulling them into shape; eliminating the need to delete and rebuild sections. This improvement makes it faster to add waypoints, refine route choices, and adapt plans, particularly for those who prefer mapping rides on desktop before heading out.

Full elevation data for imported routes

Cyclists can now view complete elevation profiles for routes imported from Strava, Komoot, or GPX files. Elevation data is displayed both before and during rides, allowing users to better

prepare for climbs and descents. Previously unavailable on imported routes, this feature brings Beeline in line with rider expectations for detailed route insight.

Additional coverage and language support

Beeline Smart Routing and Beeline Plus are now available in Brazil, Uruguay, Argentina and Chile. A full list of coverage can be found [here](#).

In addition to the existing availability in English and German, audio directions will now be available in French, Japanese, Spanish, Dutch, Portuguese and Czech.

Available now

All new features are available in the latest version of the Beeline app (iOS: 3.4.3806, Android: 4.2.7578), downloadable via the App Store and Google Play.

With this spring release, Beeline continues to evolve Velo 2 into a powerful yet intuitive navigation companion—helping cyclists ride with greater confidence and clarity.

END.

About Beeline

We're building a world where getting on two wheels is easy and knowing where you're going is even easier.

Our mission is simple: to make every ride safer, more enjoyable, and more connected to the world around you, wherever you're going.

Beeline exists to empower cyclists and motorcyclists with navigation tools that are intuitive, beautifully designed, and built to last. Whether it's your daily commute or a weekend ride into open countryside, we help you stay focused on the ride, not the tech.

From twisty lanes to city streets, Beeline makes space for riders to stay present, explore freely, and enjoy the journey.
